

The Turkish economy has continued to grow, despite all the problems that arose in 2015. One of the most significant indicators of economic activity is the consumption of industrial lubricants which are used as raw material in different manufacturing areas including, rubber & plastics, cold rolling of metal articles and the automotive industry.

Based on information received from the country's leading industrial lubricants supplier Petroyag Lubricants, the country's economy grew by more than 3.5% which represents a parallel growth of the use of industrial lubricants. Total demand for industrial lubricants 160,000 mt and Petroyag Lubricants served 24% of the market.

Petroyag Lubricants, the pioneer of the Turkish industrial lubricants market, serves more than 200 innovative products to the Turkish main industries including rubber & plastics, chemicals, iron & steel, energy, construction, agriculture, aluminium cold rolling, cosmetics and food industry since 1993. Petroyag Lubricants, who performed more than 37,000 mt sales volume in 2015, markets its products domestically and export to many countries including Russia, Romania, Bulgaria, Ukraine, Tunisia, Greece, Azerbaijan and Morocco.

Also Petroyag is looking for new opportunities for new distributors for our Export markets.

According to its strategic location, Turkey is at the centre of Russia, Africa, Europe, CIS countries and the Middle East. This advantage give our country and company the ability to reach all destinations very quickly via different transportation channels including ports, railways and highways.

Turkey's only base oil plant – the Tupras facility in İzmir – has a capacity of 400,000 mt per year of API Group I stock. In 2014 Turkey sold close to 120,000 mt base oils and imported nearly 550,000 mt. Unless there is no production for Group II & III, Turkey is considered as a terminal for delivering Petro-Chemical products with huge bulk storage capacities at the edge of the ports.

For that reason many companies have branches and distributors or make investments to reach new markets and new developing areas.
